

# Asset Management

## Full Life Cycle Asset Management Services

Vision Technologies has extensive experience with the full life cycle of IT asset management from acquisition to disposal. In support of our numerous tasks across the commercial and federal arenas, we have developed a comprehensive asset management process that provides the detail required to manage and control an organization's IT assets combined with a tight supply chain managed by a streamlined staff with sophisticated logistics tools. This enables Vision to reduce the number of staging/storage locations, manage inventory dynamically to meet customer demand and integrate processes to deliver improved performance and consistency.

IT asset management is not a one-time activity - it is an ongoing process. With the right tools in place and with the operational processes to fully utilize the tools, we can optimize the value you derive from your IT systems. Knowing which IT assets you have and how they are used has become a challenge in today's complex and ever evolving IT infrastructure. A typical IT infrastructure has many different assets of various types, and new assets are being deployed daily to support the evolving business needs. Tracking hardware and software inventory has become a burden for many IT managers.

But taking IT inventory is not enough. Once you gain control over your IT inventory, the next step is to correlate them against the related financial assets, such as contracts, software licenses or service agreements, to understand how they relate to the business and take any actions required. IT Asset Management will help you easily track your assets and understand how they impact your business.

*In order for IT asset management to be effective, the identification and tracking of key components must be performed frequently and regularly.*

*Vision Technologies' IT Professionals will help ensure the long term success of your IT Asset Management program, and help you boost return on your technology investment.*

Vision Technologies provides the following asset management services:

- ▶ Asset Inventory
- ▶ Asset Tagging
- ▶ Asset Reconciliation
- ▶ Data Conversion
- ▶ Asset Management
- ▶ Disposal
- ▶ Training

### Challenges addressed by IT Asset Management

- ▶ Knowing which assets you have, where they are, and their configuration.
- ▶ Easily auditing your entire infrastructure, and deploy proper hardware asset management processes.
- ▶ Tracking changes to your assets, such as new computers or software installations.
- ▶ Planning IT migrations and new IT projects.
- ▶ Correlating IT assets against business financial records such as contracts and licenses.

### IT Asset Management benefits

- ▶ IT Asset Management can help reduce the cost of administrating your hardware inventory, improve security and ensure you are always ready for your next IT audit.
- ▶ Reduce IT costs by better managing and administrating your IT assets.
- ▶ Ensure software compliance by knowing what you have and what you use.
- ▶ Align IT with business goals to support business decisions such as purchasing or renewals.
- ▶ Improve productivity by empowering the IT administration team to easily track and manage assets and their changes.
- ▶ Detect unauthorized and illegal software by adopting a software usage policy and easily detecting any policy deviations.
