

Mission Critical Facility Management

Vision Technologies' Data Center and Mission Critical Facility Management group provides innovative consulting and full-service solutions for Commercial Facilities and Information Technology Data Centers. These solutions include construction design and consulting services blended with Information Technology Solutions for data, voice, video, local area and wide area networking and information technology solutions.

Data Center and Facility Management Services:

- Infrastructure and Building Audits
- Site Analysis and Due Diligence
- Design Services
- Mission Critical Consulting Services
- Cable Infrastructure Services
- End-to-End Facility Management
- Building and Site Management Systems
- Commercial Automation
- Rack, Cage and Cabling Services
- Wireless In-House Solutions
- Security Services
 - CCTV
 - Monitoring
 - Access Control

The Data Center and Facility Management team specializes in data centers and other mission critical facilities. By combining our Information Technology, Professional Services and Mission Critical Facility Management experience, Vision Technologies differentiates itself from other IT consulting or Construction Management firms. Our ability to deliver reasonable and cost effective business solutions, focused on mission critical infrastructure, and high-end information technology applications, provides the support you need for facilities which require 100% uptime.

Vision Technologies can provide design services, project management, installation and appropriate testing and documentation for your entire project. Having a single point of contact not only simplifies your workload and prevents costly delays, it ensures a seamless and integrated solution that will be ready for production when you need and expect it. Our Rack, Cage and Cabling Infrastructure services can be utilized on a standalone basis. These services are also a perfect addition to our other capabilities.

Vision Technologies' Facility Management program provides a single point of contact for administration of all design, engineering, purchasing, construction and consulting issues. Our end-to-end, team-based process frees your internal resources from the distraction of day-to-day supervision of highly complicated and time-consuming projects. It also allows us to manage the major trades directly (i.e. electrical, mechanical and fire protection), thus eliminating confusion and duplication of effort.

No other company can match Vision Technologies' unique qualifications:

- ▶ **People.** Our senior management and highly trained industry professionals offer breadth and depth of experience in both construction and information technology.
- ▶ **Design Experience.** Vision Technologies continuously strives to develop, refine and update design standards for our customers. Our ability to "value engineer" a design to eliminate superfluous elements has helped customers realize significant savings on their Vision Technologies-designed projects.
- ▶ **Mission Critical Facility Experience.** We have built over 1 million square feet of mission-critical facilities for some of the world's most demanding and information-dependent companies.
- ▶ **Information Technology Experience.** Vision Technologies partners with proven hardware, software and systems integrators to deliver reliable technology solutions and services.
- ▶ **Complete Range of Services.** We can manage every phase of a project, from facilities design and construction management to IT and Network design, implementation, and operations support. We insure delivery as expected, on time and within budget.
